

Pull Request Template

Description

Brief description of the changes and their purpose.

Type of Change

- ☐ Bug fix (non-breaking change which fixes an issue)
- ☐ New feature (non-breaking change which adds functionality)
- ☐ Breaking change (fix or feature that would cause existing functionality to not work as expected)
- ☐ Documentation update
- ☐ Performance improvement
- ☐ Code refactoring

GitHub Copilot Review Instructions

Automated Validation Checklist

Please ensure GitHub Copilot validates the following:

Code Quality & Standards

- ☐ TypeScript strict mode compliance
- ☐ ESLint rules adherence
- ☐ Prettier formatting applied
- ☐ No console.log statements in production code
- ☐ Proper error handling implemented

Next.js Best Practices

- ☐ App Router patterns followed
- ☐ Server/Client Components properly separated
- ☐ Server Actions used for form handling
- ☐ Proper loading and error states
- ☐ SEO considerations addressed

Database & Prisma Validation

- ☐ Prisma schema changes validated
- ☐ Database migrations tested
- ☐ Transaction handling implemented where needed
- ☐ No N+1 query problems
- ☐ Proper error handling for database operations

Edge Runtime Compatibility

- ☐ Code is Edge Runtime compatible
- ☐ No Node.js-specific APIs used inappropriately
- ☐ Web APIs used instead of Node.js APIs where applicable

- ☐ Third-party dependencies are Edge compatible

Security Validation

- ☐ No hardcoded secrets or API keys
- ☐ Input validation and sanitization implemented
- ☐ CSRF protection where applicable
- ☐ XSS prevention measures in place
- ☐ Proper authentication and authorization

Performance Validation

- ☐ Core Web Vitals impact assessed
- ☐ Bundle size impact evaluated
- ☐ Proper caching strategies implemented
- ☐ Dynamic imports used for code splitting
- ☐ Images and assets optimized

Accessibility Compliance

- ☐ ARIA labels and roles implemented
- ☐ Keyboard navigation supported
- ☐ Screen reader compatibility ensured
- ☐ Color contrast requirements met
- ☐ Focus management implemented

Dependency & Environment Validation

Dependency Management

- ☐ New dependencies justified and documented
- ☐ Version compatibility verified
- ☐ Security vulnerabilities checked
- ☐ Bundle size impact assessed
- ☐ Peer dependencies properly configured

Environment Compatibility

- ☐ Works in development environment
- ☐ Staging environment compatibility verified
- ☐ Production environment tested
- ☐ Environment variables properly configured
- ☐ Secrets management implemented correctly

Testing Requirements

- ☐ Unit tests written for new functionality
- ☐ Integration tests added where appropriate
- ☐ Component tests implemented
- ☐ Test coverage maintained above 80%
- ☐ All tests passing

Documentation Updates

- ☐ README updated if necessary
- ☐ API documentation updated

- ☐ JSDoc comments added for public functions
- ☐ Changelog updated
- ☐ Migration guides provided if breaking changes

Deployment Readiness Checklist

Pre-deployment Validation

- ☐ All automated tests passing
- ☐ No TypeScript compilation errors
- ☐ Database migrations validated
- ☐ Environment configurations verified
- ☐ Performance benchmarks met

Post-deployment Monitoring

- ☐ Error logging configured
- ☐ Performance monitoring in place
- ☐ Database query performance validated
- ☐ User experience metrics tracked

Additional Context

Add any other context about the pull request here, including:

- Screenshots for UI changes
- Performance benchmarks
- Breaking change migration guides
- Related issues or dependencies

Reviewer Notes

Special instructions for human reviewers:

- Areas requiring extra attention
- Known limitations or trade-offs
- Future improvement opportunities

Note for Reviewers: This PR has been validated against our comprehensive Copilot integration standards. Please verify that all automated checks have passed before approving.
